15 including specifying an allocation of the substructures to applications in a connection-specific manner. Preferably, the method includes specifying in a connection-specific manner whether or not all structures of the ATM adaptation layer frame are a same size. If not all substructures of an ATM adaptation layer frame are a same size, the method provides for limiting a number of ATM cells

20 per ATM adaptation layer frame to five. The number of ATM cells contained in an ATM adaptation layer frame is specified by signaling in a set-up of a connection.

In one embodiment, the present invention calls for specifying a number of ATM cells contained in an ATM adaptation layer frame administratively in establishing
